

THE C-SERIES BY COMBILIFT

Capacity

2,500 kg – 25,000 kg

Lift Height

404mm-12m

Engine Types

Gas/Diesel/Electric

Machinery Type

MultiDirectional

The Original Multidirectional Forklift

Designed to improve your workflow by effectively becoming three forklifts in one, a sideloader, counterbalance and narrow aisle forklift. This revolutionary design eliminates costly double handling of material and improves productivity enabling you to get more done in less time.

C-SERIES FEATURES

GET **MORE DONE** IN LESS TIME WITH COMBILIFT C-SERIES

Designed to improve your workflow by effectively becoming three forklifts in one, a sideloader, counterbalance, and narrow aisle forklift. This revolutionary design eliminates costly double handling of material and improves productivity. The Combi C-series can quickly change the direction of its wheels and move in any direction. This 4-way movement gives this forklift the versatility to transport long loads through narrow doorways and around objects with confidence and utmost safety.

SAFEST 4-WAY FORKLIFT AVAILABLE

Safety is at the core of the design of the Combi C-series range for the operator, the load, and the site. It's a very low centre of gravity and the integrated platform provides a very stable base for resting long loads on while transporting. There is no longer a need to carry the load at elevated levels reducing the risk of injury or damage to the product. Safety is further enhanced by the innovative moving mast system and hydraulic forklift positioner allowing the operator to adjust the forks, reach out, lift the load, and place it on the platform without the need to leave the cab, reducing the risk of injury and strain. Visibility is greatly maximised by having the cab mounted to the side of the mast. The operator has a clear view of the forks and the load, increasing safety and reducing the risk of product damage.

A RELIABLE WORKHORSE

Tough reliable and built to last, the Combi C-series is built to ensure the highest levels of performance and durability. From its range of powerful engines to its no-nonsense design, it has the strength to handle grueling schedules demanded of it, indoors and out, in all weather conditions. Built using the highest quality standard components and only essential sensitive electronics they are easily maintained extending the operational lifespan which leads to an excellent return on investment. As the C-series is designed to operate for extended periods, drivers' comfort is of utmost importance. The Combi C-series is designed with a spacious, easy-to-access cab fitted with an easy-to-adjust, full-suspension seat. The controls are intuitive and ergonomically positioned controls improving driver confidence and comfort.

INCREASE YOUR STORAGE CAPACITY

An advantage of a 4-way forklift is that the Combi C-series can operate as a narrow aisle forklift. It can effortlessly transport long loads in aisles as narrow as its own width. To take further advantage of its narrow aisle performance the combi C-series can operate in guided aisle configuration. By utilising the advantages of the Combi C-series the storage capacity of your site could be dramatically improved, by as much as 100%. As the truck has the ability to operate as a side loader carrying long loads in narrow aisles and has the agility to move around the entire site with confidence, considerable gains in storage density and throughput can be achieved.
